Permutation importance on the held-out 2010 cohort (6-year horizon): age, then the next 10 predictors per model
TabICL
Age (rank 1): 23.2 (21.4-25.2)
Education
Race/ethnicity
Doctor visits (2 y)
Weight
Difficulty using a map
Sex
Self-rated health
Proxy interview
Living siblings
Ever drinks alcohol
0.0 1.5 3.0
CatBoost
Age (rank 1): 23.1 (21.2-24.9)
Education
Race/ethnicity
Self-rated health
Difficulty using a map
Doctor visits (2 y)
Proxy interview
Self-rated memory
Nursing-home nights (2 y)
Weight
Ever drinks alcohol
0.0 1.5 3.0
LightGBM
Age (rank 1): 23.2 (21.4-25.1)
Education
Race/ethnicity
Doctor visits (2 y)
Self-rated memory
Proxy interview
Ever drinks alcohol
Difficulty using a map
Weight
Self-rated health
Living siblings
0 2 4
Penalized LR
Age (rank 1): 21.1 (19.2-23.0)
Education
Race/ethnicity
Sex
Difficulty using a map
Weight
ADL difficulties (0-5)
Labor force status
Ever drinks alcohol
Stroke
CES-D: everything an effort
0 2 4
RealMLP
Age (rank 1): 19.3 (17.6-21.0)
Education
Race/ethnicity
Weight
Ever drinks alcohol
Doctor visits (2 y)
Difficulty using a map
Sex
Proxy interview
Self-rated health
Stroke
0 2 4
GAT
Age (rank 1): 16.6 (15.0-18.3)
Nursing-home nights (2 y)
Education
Weight
Race/ethnicity
Sex
Difficulty using a map
Self-rated health
CES-D: everything an effort
Doctor visits (2 y)
Ever drinks alcohol
0 2 4
Decision tree
Age (rank 1): 19.6 (17.8-21.5)
Self-rated health
Doctor visits (2 y)
Education
Race/ethnicity
Difficulty using a map
Gross-motor difficulties (0-5)
Self-rated memory
Father's age
Living siblings
Proxy interview
0 2 4
Gaussian NB
Age (rank 1): 2.1 (1.9-2.3)
Nursing-home nights (2 y)
Education
Living parents
Difficulty using a map
Marital status
Labor force status
Weight
ADL difficulties (0-5)
Nursing-home stays (2 y)
Ever drinks alcohol
0.0 0.8 1.6
Decrease in AUPRC when the predictor is permuted (percentage points; 95% CI)
